## Session: #403

**Theme:** 5. Climate Change and Socioenvironmental Perspectives

**Session format:** Regular session

### Domestication of Space: Internal and External Dwelling Structures in Middle and Upper Palaeolithic Sites

The structuration of the settlement area is a bright feature of Middle and Upper Palaeolithic campsites. Different occupation characteristics can be identified by the functional specifications of distinct archaeological structures, in relation to the palaeoecological framework and the dynamics of settlement development over time.

Dwellings and constructional materials, pits (storage or dumping), hearths, activity areas, such as workshops or butchering zones, demonstrate the spatial arrangement of residential practices in different sectors. Their study requires interdisciplinary research to establish their chronological and functional relationships and the insertion of the settlement in the surface microrelief and local landscape features. The analysis of separate structures with functional peculiarities from Middle and Upper Palaeolithic campsites allows to reconstruct the interaction of inhabitants with the surrounding landscape, to understand the links between different types of activity inside the settlement area, to establish functional and seasonal characteristics of occupation and to identify behavioural features of Palaeolithic settlers.

The session gives the opportunity to connect new researches on dwelling structures from Middle and Upper Palaeolithic sites through Europe, and interpretative studies of spatial behaviour, in relation with specific landscape, palaeo-ecological and cultural features.

**Keywords:** Palaeolithic, dwelling, structures

#### **Organisers:**

Stéphane PEAN, Muséum national d'Histoire naturelle, UMR 7194 HNHP (France)

Pavlo Shydlovskiy, Taras Shevchenko National University of Kyiv (Ukraine)

Zsolt Mester, Eötvös Loránd Tudományegyetem BTK Régészettudományi Intézet (Hungary)

The Call for contributions for the [28th EAA Annual Meeting in Budapest](http://e-a-a.org) (31 August - 3 September 2022) is open until 10 February 2022.

Call for contributions **ends on Thursday 10 February 2022, 23:59 CET**. After this date, the session organisers and the Scientific Committee will evaluate all contributions and sessions. Following the evaluation by both session organisers and the Scientific Committee, the EAA Secretariat will announce accepted contributions before **24 March 2022**.

Feel free to contact us with queries at [helpdesk@e-a-a.org](mailto:helpdesk@e-a-a.org).

Kind regards,  
Your EAA Team
